

Post-Treatment Instructions

Soft Relines

- A soft liner/functional impression material has been placed inside your denture/partial. It will cushion your gums and provide a better fit, and it can also act as impression material to make a mold of your mouth.
- It is important that this material is not torn or distorted.
- It **MUST** be worn for the first 48 hours, including during sleep unless advised otherwise. After the first 48 hours, use a gentle stream of cold water to clean the teeth and acrylic on the **OUTSIDE** only.
- **DO NOT** clean the inside of the denture. Rinse the inside of the denture **AFTER** the first 48 hours, if needed, with cold water only.
- **DO NOT** use denture cleaners, alcohol, or hot foods during this time as they can distort the liner
